Answers - Short Answer Questions

1. Intensive farming is a method where crops are grown mainly for local consumption, often in densely populated regions.
2. Plantation agriculture is commercial farming where a single crop is grown on a large estate.
3. Shifting agriculture is called temporary because farmers cultivate one plot for some time and then move to another plot.
4. Commercial agriculture mainly uses machines and is done on a large scale.
5. In co-operative farming, farmers form a society and pool their land to work together.
